

OVERLAYER&TOWER+

INNOVATIVE FULLY AUTOMATIC IN-LINE PALLETIZING SOLUTION

OVERLAYER AND TOWER+ together form the most compact high speed palletizing line for tissue rolls.

OVERLAYER is a patented layer forming solution integrated with a bundling machine capable of forming any layer with both bundled and Display Ready Product.

The bundler forming tunnel dimensions are not fixed during operations, but they vary according to the selected layer mosaic.

Two cartesian robots positioned at the exit of the sealing jaws prepare the layers combining the modules (which can be both bundles or groups of packs) coming from the forming tunnel.

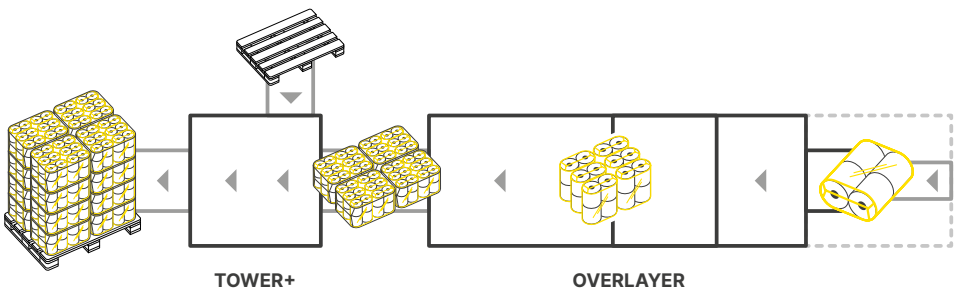

TOWER+ is the palletizing unit within the Plusline system, stacking the layers coming from the **OVERLAYER**, adding interlayers when required.

It can work with EURO, UK and NA pallet sizes, in half and full height.

The Plusline palletizing system can handle mosaics with "on-edge" product too.

MAIN FEATURES

- Integrated bundling and palletizing with total flexibility
- Layer formation in the bundling machine
- Bundles and Display Ready Pallets with any layer mosaic
- Minimized layout footprint
- Extreme process simplification
- Better working conditions for operators
